Vitis vinifera

CLIMBER

OUTDOOR

PROJECT NOTES

over second floor

Description

A deciduous woody vine cultivated for its sweet, edible berries, widely used for fresh consumption, juice, wine, and raisins.

Care Data

WATER

- Water deeply and regularly, especially during dry periods and fruit development.
- Reduce watering as fruit ripens to prevent splitting.
- Mature vines are somewhat drought tolerant but benefit from consistent moisture.

SUNLIGHT

- Requires full sun, at least 6-8 hours of direct sunlight daily.
- Good sunlight is crucial for fruit production and quality.

SOIL

- Prefers well-draining soil.
- Tolerates a range of soil types but thrives in loamy or sandy loam.
- Ideal pH is between 6.0 and 7.0.

MAINTENANCE

- Prune annually in late winter or early spring to manage growth, improve air circulation, and encourage fruit production.
- Provide strong support structures (trellis, arbor) for climbing.
- Fertilize moderately in spring, avoiding excessive nitrogen.
- Monitor for pests and diseases and treat promptly.

Common Diseases & Pests

- Powdery mildew
- Downy mildew
- Black rot
- Phylloxera (pest)
- Grape berry moth (pest)

Taxonomy Lineage

KINGDOM	Plantae
DIVISION	Tracheophyta
CLASS	Magnoliopsida
ORDER	Vitales
FAMILY	Vitaceae
GENUS	Vitis
SPECIES	vinifera

teak

Tectona grandis

 TREE

 OUTDOOR

Description

A large, deciduous hardwood tree native to south and southeast Asia, highly valued for its durable, water-resistant, and pest-resistant timber.

Care Data

WATER

- Requires consistent moisture, especially during dry periods and for young trees.
- Ensure good drainage to prevent waterlogging.

SUNLIGHT

- Thrives in full sun, needing at least 6-8 hours of direct sunlight daily.

SOIL

- Prefers deep, well-drained, fertile loamy or sandy-loam soils.
- Tolerates a range of soil types but avoids heavy clay or waterlogged conditions.
- Optimal pH range is slightly acidic to neutral (6.0-7.5).

MAINTENANCE

- Regular pruning is essential for good form and timber quality, especially in young trees.
- Monitor for pests and diseases and apply appropriate treatments.
- Fertilize young trees to promote vigorous growth.
- Protect from strong winds when young.

Common Diseases & Pests

- Teak defoliator (*Hyblaea puera*)
- Teak skeletonizer (*Paliga damastesalis*)
- Root rot (various fungi)
- Stem borers
- Powdery mildew

mango tree

Mangifera indica

 TREE

 OUTDOOR

Description

A large, evergreen tropical tree native to South Asia, widely cultivated for its sweet, juicy fruit.

Care Data

 **WATER**

- Young trees: Water regularly, keeping soil consistently moist but not waterlogged.
- Mature trees: Drought-tolerant once established; water deeply during dry spells, especially when flowering and fruiting.
- Reduce watering before flowering to encourage bloom.

 **SUNLIGHT**

- Requires full sun (at least 6-8 hours of direct sunlight daily).
- Prefers hot, frost-free climates.

 **SOIL**

- Prefers well-draining, fertile soil.
- Tolerates a range of soil types, but ideally sandy loam.
- pH: Slightly acidic to neutral (5.5-7.5).

 **MAINTENANCE**

- Prune annually after fruiting to maintain size, shape, and promote air circulation.
- Fertilize regularly during growing season with a balanced fertilizer.
- Monitor for pests and diseases, treating as necessary.
- Protect young trees from frost.

Common Diseases & Pests

- Anthracnose
- Powdery mildew
- Mango malformation
- Fruit flies
- Mealybugs
- Scale insects
